## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application:

- 1-57. (Canceled)
- 58. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising a biguanide polymer, a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and a carrier selected from the group consisting of a cream, a lotion, a deodorant, a spray, a gel, a wax, an oil, an ointment, a soap, and an alcohol, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

- 59. (Canceled)
- 60. (Previously presented) The method of claim 58, wherein the biguanide polymer comprises poly(hexamethylenebiguanide), poly(hexamethylenebiguanide) hydrochloride, poly(hexamethylenebiguanide) gluconate, poly(hexamethylene-biguanide) stearate, or a derivative thereof.
  - 61. (Canceled)
- 62. (Previously presented) The method of claim 58, wherein the metallic material is silver or a silver compound.
- 63. (Previously presented) The method of claim 62, wherein the metallic material is silver nitrate.
- 64. (Previously presented) The method of claim 63, wherein the metallic material is silver iodide.

Application No. 09/392,842 Amendment dated November 21, 2005 in response to Office Action of May 20, 2005

- 65. (Previously presented) The method of claim 58, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 66. (Original) The method of claim 65, wherein the substantially water-insoluble organic compound comprises a reactive member selected from the group consisting of carbodiimide, isocyanate, isothiocyanate, succimidyl ester, epoxide, carboxylic acid, acid chloride, acid halide, acid anhydride, succimidyl ether, aldehyde, ketone, sulfonyl chloride, sulfonyl halide, alkyl methane sulfonate, alkyl trifluoromethane sulfonate, alkyl paratoluene methane sulfonate and alkyl halide.
- 67. (Original) The method of claim 65, wherein the substantially water-insoluble organic compound is an epoxide selected from the group consisting of methylene-bis-N,N-diglycidylaniline, bisphenol-A-epichlorohydrin and N,N-diglycidyl-4-glycidyloxyaniline.
- 68. (Previously presented) The method of claim 58, wherein the biguanide polymer comprises a chemical group capable of forming a covalent bond.
- 69. (Original) The method of claim 68, wherein the covalent bond can be generated at room temperature.
- 70. (Original) The method of claim 68, wherein the chemical group is selected from the group consisting of an amino group, a carboxylic acid group, a hydroxyl group, or a sulfhydryl group.
- 71. (Original) The method of claim 68, wherein the chemical group is selected from the group consisting of carbodiimide, isocyanate, isothiocyanate, succimidyl ester, epoxide, carboxylic acid, acid chloride, acid halide, acid anhydride, succimidyl ether, aldehyde, ketone, sulfonyl chloride, sulfonyl halide, alkyl methane sulfonate, alkyl trifluoromethane sulfonate, alkyl paratoluene methane sulfonate and alkyl halide.

## 72-88. (canceled)

89. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising (i) an organic polycationic polymer; (ii) a metallic material an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble; and (iii) a carrier selected from the group consisting of a cream, a lotion, a deodorant, a spray, a gel, a wax, an oil, an ointment, a soap, and an alcohol, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

90. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising, in a dermal antiseptic formulation, a biguanide polymer, a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin,

wherein the dermal antiseptic formulation is selected from the group consisting of surgical scrub formulations, pre-operative skin preparations, healthcare personnel handwashes, antiseptic handwashes, antimicrobial soaps, antimicrobial creams, antimicrobial hand sanitizers, antimicrobial deodorants, antimicrobial lotions, and antimicrobial gels.

91. (Original) The method of claim 90, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.

Application No. 09/392,842 Amendment dated November 21, 2005 in response to Office Action of May 20, 2005

92. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising, in a dermal antiseptic formulation, an organic polycationic polymer and a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin,

wherein the dermal antiseptic formulation is selected from the group consisting of surgical scrub formulations, pre-operative skin preparations, healthcare personnel handwashes, antiseptic handwashes, antimicrobial soaps, antimicrobial creams, antimicrobial hand sanitizers, antimicrobial deodorants, antimicrobial lotions, and antimicrobial gels.

93. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising a biguanide polymer, a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and a skin-compatible component selected from the group consisting of emollients, thickeners, humectants, skin moisturizing agents, and surfactants, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

- 94. (Original) The method of claim 93, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 95. (Currently amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin a composition comprising (i) an organic polycationic polymer;

(ii) a metallic material an antimicrobial metallic material which is substantially water-insoluble or

can be rendered substantially water-insoluble; and (iii) a skin-compatible component selected from

Application No. 09/392,842 Amendment dated November 21, 2005 in response to Office Action of May 20, 2005

the group consisting of emollients, thickeners, humectants, skin moisturizing agents, and surfactants, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

96. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin, by spreading or immersion, a composition comprising a biguanide polymer, a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

- 97. (Original) The method of claim 96, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 98. (Currently Amended) A method for providing antimicrobial activity on skin, the method comprising the steps of:

administering to skin, by spreading or immersion, a composition comprising an organic polycationic polymer and a metallic material, an antimicrobial metallic material which is substantially water-insoluble or can be rendered substantially water-insoluble, and

forming a moisture-resistant film on the skin, thereby imparting a persistent antimicrobial activity on the skin.

- 99. (Previously presented) The method of claim 58, wherein the film is sweat-resistant.
- 100. (Previously presented) The method of claim 58, wherein the film does not leach into a contacting aqueous solution.

Application No. 09/392,842 Docket No.: 05402/100M695-US1 Amendment dated November 21, 2005

in response to Office Action of May 20, 2005

101. (Previously presented) The method of claim 58, wherein the metallic material is selected from the group consisting of a metal, a metal salt, a metal complex, a metal alloy, and combinations thereof.

102. (New) The method of claim 58, wherein the metallic material binds to cellular proteins of microorganisms and is toxic to microorganisms.
